Expectations for the SET To learn to use Winlink (Digital) for passing traffic during disasters and experience the overall SET on a large scale.

What Occured Exactly that and what will in reality happen when passing traffic, between response/reply times and searching for frequencies that resources will be monitoring.

What Went Well and Why Passing the traffic went well digitally and for voice because I was prepared with the canned messages.

Improving Operation and How The replies could've been better with a little more instructions from the Pre-SET and some imagination for the requests.
