

<b>Name</b>	Bill Wells
<b>Call</b>	W4BOT
<b>Expectations for the SET</b>	Simulating capacity-limited Carilion Franklin Memorial and Lewis Gale Hospital locations, the Blue Ridge EMCOMM club sent Patient transfer requests to a simulated Roanoke NSPA Patient Transfer Station, which assigned Hospital destinations. At mid-exercise, all major Roanoke Hospitals simulated capacity-limits, and an open Patient transfer request was made to any available Hospital.
<b>What Occured</b>	The routine Patient transfers from remote Hospitals to major Roanoke Hospitals went well. Thanks to the exercise's RedTeam's assistance, the Wythe County Community Hospital reported available beds, and the at-capacity Franklin Memorial Hospital patient was transferred.
<b>What Went Well and Why</b>	All went well due to monthly NSPA Hospital drills.
<b>Improving Operation and How</b>	Perhaps more frequent exercises if possible.
<b>Your Operating Location</b>	simulating the Carilion Franklin Memorial Hospital from home.
<b>Other Calls at Your Location</b>	KG4KRB and KM4NS also operated from their homes.
