

Name	Paula
Call	KG4IIE
Expectations for the SET	To function as if we were in the affected area. Our goal was not to use repeaters or internet resources. To be able to handle Peer to Peer traffic from multiple stations and to reach a Winlink Gateway out of the affected area. Put into play the Simplex Chart that was developed following last year's exercise "The Big One". Have a Command Center and then 3 separate Net Controls to keep confusion and system overloads to a minimum.
What Occured	We had 10 healthcare facilities that were able to pass and receive traffic both digital using alternate frequencies and voice using only Simplex voice frequencies. We did not use repeaters or internet resources. By having the Simplex Chart available that was developed following last year's exercise, Net Controls were able to contact healthcare facilities using relaying through other healthcare facilities if necessary.
What Went Well and Why	The Team functioned as a well oiled machine. After participating in these types of exercises for the past 7 years with Glen's expertise and guidance in organizing these types of trainings we have learned from each exercise. We have also put into play the lessons learned and resolved shortfalls when they appeared.
Improving Operation and How	For participants to use the resources that were available on the EMP 2022 website. Supporting agencies should sign up on the proper forms well in advance of the Exercise and submit ICS 205 forms. This would give all a chance to see what agencies/organizations were going to participate and not be bombarded the day of the event with many who just sent messages randomly.
Your Operating Location	Riverside Regional Medical Center, Newport News, VA Regional Healthcare Coordination Center, Newport News, VA
