

Expectations for the SET	Heavy use of WINLINK to move traffic and a little bit of VHF voice to carry traffic due to WINLINK problems. Monitoring the VHF voice and HF voice would be easy.
What Occured	From my perspective WINLINK operations went quite well and as a result there was little need for VHF voice to carry traffice due to WINLINK problems. There was very little VHF voice traffic and I was unable to monitor any HF voice traffic (tried 80 and 60 meters).
What Went Well and Why	Was able to reach all operators that I needed to via WINLINK, that is a first!
Improving Operation and How	Have more frequent updates on VHF voice net on where the HF voice net is operating.
