Operation Wildfire conducted on Sat., Oct. 01, 2011

To further develop and refine operational skills with respect to conveyance of varying forms of traffic using both voice and digital means (Winlink-AirMail), and to become familiar with the physical layout and potential geographical challenges when operating from the Pulaski County EOC.

Participants were Josh Tolbert, Pulaski County Emergency Manager, Phil Foster (AJ4HJ), ARES Montgomery County, and Roger Bell (N4FPA) A.E.C.-ARES, Pulaski County. Portable operations were sited at Pulaski County Administration Building in the EOC Conference Room. In order to provide for maximum situational awareness, we used two dual-band VHF/UHF radios and one single band VHF radio, in addition to a dedicated Winlink station. We placed a 28 foot high portable antenna mast with two 3 element beams separated 16 feet vertically to access/monitor voice nets originating to the south - southeast and southwest of our location in the Town of Pulaski. Two hundred feet from our primary beam antennas, a second 12 foot high portable mast/stand with a 2mtr J-Pole antenna was placed. This permitted us to monitor the 147.180 N4NRV Repeater in Dublin in addition to the 146.985 repeater located on Poor mountain in Roanoke. A brick, three story building separated the two antenna setups, thus desensing was negated. Three 150 ft runs of double shielded, RG8X and RG8U coax were used. Although there is a bank of electrical transformers located 100 feet from the EOC in addition to a substantial number of older fluorescent lighting units in the EOC, we did not experience any RFI during the SET.

Between 8:30a.m. and 8:50 a.m., viable access was confirmed on all designated voice net frequencies and via Winlink gateway/digis of W4GHS-10 W4GHS-5 and W4GHS-10 K4EZ-6. From approximately 9:20 a.m. and thereafter, access to this Winlink gateway became substantially delayed due to obvious amount of overwhelming packet traffic originating from other participating Winlink stations located throughout Southwest Virginia. Due to this, we were not able to pass traffic via this Winlink gateway for the remainder of the set. Unfortunately, from this location we could not access the Floyd Winlink gateway.

From our location, we were able to monitor several voice nets simultaneously and determine how traffic was flowing throughout the exercise. Given the difficulties with our accessing the Winlink gateway, we relied 100% on the primary voice net(s) to convey traffic, and found that the majority of time that traffic could be conveyed without lengthy delays. At other times, there was substantial delay due to heavy use of primary voice net. As a result, we could only convey six of the ten items of assigned traffic and received responses on three.

Setup of our equipment in an unfamiliar location took 95 minutes, with two voice and one Winlink station fully operational by 8:20 AM. We were please that no RFI challenges existed. The use of the Pulaski County EOC facility provides us with a sound operating knowledge of this position, which will be of substantial value in the event we are called upon by the County to assist and/or to provide emergency communications. This exercise permitted us to further refine and enhance our operational knowledge regarding communication challenges that can and will arise during emergency operations. Thus, the overloaded Winlink gateway provided a real-time challenge to our communications flexibility and again reflects a situation which could likely occur during a real communications emergency.

In addition, this set provided the opportunity for our new emergency manager to become familiar with the communications capacity that can be provided by amateur radio. He made excellent inquiries as to areas of our operational expertise to include the various amateur radio repeater systems used, range, etc., and of the potential capacity for Winlink to move traffic in and out of an affected area.

With respect to the overall handling of traffic as monitored on the various voice nets, and because this was a training exercise, it permitted individuals who were unfamiliar with net operations and/or the handling of traffic to gain valuable experience. Thus, it is understandable that on a number of occasions, traffic would have been conveyed in a more concise and expedient manner if the operators had prior experience in handling traffic. As a rule, Net Control redirected traffic appropriately. The transfer of traffic to other voice nets and a situational awareness of where operators had been directed can be improved upon. Again, this comes with experience of which this SET provided. It is obvious that we collectively need more frequent training with regard to overall net protocol, which includes advising Net Control of our in/out net status.

It is clear that we must maintain net protocols while retaining our flexibility to utilize all resources available to us for the conveyance of traffic on a timely and accurate basis. Josh Tolbert, E. M., Pulaski County, Phil Foster, AJ4HJ and I, convey our collective thanks to Glen Sage, W4GHS for his endeavors in establishing the SET, and to all the SET participants for their dedication to providing emergency communications.

By: Roger Bell, N4FPA
AEC - Pulaski County ARES
