

Name	Davvon Davidson
Call	KO4TQP
Expectations for the SET	My expectations of this practice was to simulate an EMP in the event that it happens. To be able to communicate to other facilities through P2P digipeat, to my assigned net control on simplex.
What Occured	Once I got everything set up, I was able to contact net control for check-in by voice contact. At this point I waited for instructions via P2P messaging, so I could respond back to ensure that in case of an actual Event. I would be able to relay any information, needs, or anything else vital for the event Unfortunately my station was only able to do voice to voice. My net control was in constant contact with me working through the issues, but to no avail we could not get the digipeat to send or receive P2P.
What Went Well and Why	Over all it was a good event! I was still able to use radio voice to contact net control and respond to other HAM radio operators that had called me. This told me that in case of a true Event, that if everything fails that I was still able to communicate to my net control! So honestly it was a win for me!
Improving Operation and How	Well I am VERY new with Amateur Radio (just got my license 09/2021). And just started with H.E.A.R.T. I have a lot to learn, and I am sure that with time and these exercises, I will improve!
