

Name	Gary Shaver
Call	KM4LMG
Expectations for the SET	To test my equipment and operating procedures. To make contacts with stations within and near the EMP area to obtain their Situation Status and offer support.
What Occured	Morning voice check-in (via relay). Winlink messaging requesting Situation Status reports and offering further support to stations within or near EMP area. I used plain text messages to make initial contacts when requesting status reports and offering further support.
What Went Well and Why	My equipment was fully operational. I did manage to get a morning voice check-in via relay. Winlink gateway was operational. Received several replies with Situation Reports (plain text and ICS213s).
Improving Operation and How	My Winlink address was incorrect on the registration site so I never received the Net Control initial Winlink message. I had a lot of noise early morning on primary frequency. There were several amateur operators using frequencies on or near the secondary frequency.
